Good Morning Susan,
Per our telephone conversation today, the following H&S requirements exist for those field observer employees deploying in response to Hurricane Harvey,.

Member of the RSC who **Does Not** conduct field work as part of their routine duties: Minimum required is the 24hr EPA H&S training (available online through Skillport) with the 8hr annual refresher and the pre-deployment screening with FOH which includes appropriate immunizations (Hep A, Hep B, and Tetanus).

Member of the RSC who **DOES** conduct field work as part of their routine duties: Minimum required is the 24hr EPA H&S training (available online through Skillport) with the 8hr annual refresher, current with all JHA requirements, and either a current medical surveillance exam or the pre-deployment screening with FOH which includes appropriate immunizations (Hep A, Hep B, and Tetanus).

Both parties will be required to have appropriate PPE and receive an on-site H&S orientation briefing, once deployed in theater.

Once you have identified names for these positions, please let me know so I may run a compliance check prior to their departure.

Please let me know if you have any questions or concerns.
